This Community Bulletin is intended to serve as an update for upcoming work related to the Bothell STEM 4 project, as well as a means of notifying our campus community of any significant events that may impact the sidewalks and streets surrounding the project.

What is happening on the Bothell STEM4 Project:

Building structure is now complete with the project topping out in July and shotcrete foundation walls completed first of August.

Exterior wall framing has been installed on the South and East Elevations of the building through Level 2. The exterior framing is a prefabricated panelized system. Performing the majority of the exterior framing offsite in a warehouse environment promotes productivity and shortens in the installation duration onsite.

Weather barrier and roofing are underway, with window installation beginning this week.
Interior wall framing is ongoing on the lower levels supporting the installation of MEP rough in.

Metals stairs are currently be installed.
