What is happening on the Bothell STEM4 Project:

Continuation of the concrete strike has prevented any further progress with the building structure. Level 0 pilasters, walls, and Level 1 columns are formed and ready for placement once concrete is available. The team has secured a small amount of concrete from a short load vendor for strategic placement of the elevator pit. This will allow the completion of the under slab backfill and foundation drainage in preparation for SOG placement once concrete is available. Placement of the slab on grade allows for the mobilization of the horizontal formwork contractor to start the elevated deck work.

Chilled water service installation has been completed at east end of site. "Hot tap" of the existing campus system was successful and completed without a hitch. Lines have been tested and are now backfilled. Utility crews are continuing to work on installation of the storm sewer, which should be completed in the next week.

Restoration of the West Garage landscaping is scheduled to take place over the campus spring break. Sanitary Sewer installation is also scheduled to begin 3rd week of March.
