Data Management

CCASC Recommendation: Add correct link to overlapping courses. In LOs, considering replacing “Literate programming environment” with “Perform data analysis to support decision-making”. In syllabus, make it clear that pre-requisites are required. Ensure course description describes what the course does rather than what students are supposed to learn. Consider combining aspects in course description into one sentence (“Managing, interpreting, and applying data” to better reflect bigger picture and easily link to LOs. Consider rewording or removing language around students being required to remain in their work groups beyond a certain point.
